Product Analyst | Public Services Lab

Astana, Kazakhstan | 2021-07 - 2022-04

Led requirements discovery, process modeling, and delivery coordination for digital services.

PROFESSIONAL ASPIRATIONS

I want to grow into a backend-focused analyst-developer role. I am interested in systems where business rules, data quality, and user workflows meet. My next step is to strengthen Java backend delivery while keeping strong analysis discipline. I prefer teams that value clear requirements, reliable tests, and practical documentation. Long term, I want to design maintainable digital products that reduce manual work. I also want to improve architecture decisions, API design, and database modeling. A strong environment for me includes feedback, ownership, and measurable delivery. I am motivated by useful tools, automation, and clear product outcomes. This direction combines my analysis background with hands-on engineering growth.
