JAVA | SPRING MVC | JDBC | REST API | SYSTEMS ANALYSIS | POSTGRESQL

PROFESSIONAL SUMMARY

Experienced analyst-developer combining public-sector delivery, systems analysis, Java backend practice, and data reporting. Works with stakeholders to clarify goals, document requirements, model processes, validate data, and coordinate delivery. Comfortable turning vague business needs into tested implementation-ready tasks.

WORK EXPERIENCE

Senior Business Analyst | Digital Government Solutions

Astana, Kazakhstan | 2025-01 - till now

Led requirements discovery, process modeling, and delivery coordination for digital services. Prepared stakeholder-ready specifications and clarified implementation details with developers. Supported acceptance testing, release decisions, and risk tracking during delivery.

- Defined acceptance criteria for cross-functional delivery.
- Mapped workflows and clarified API requirements.
- Coordinated review cycles with product and engineering.
- Validated reporting data against stakeholder expectations.
- Prepared diagrams and implementation notes.

Systems Analyst | GovTech Integration Lab

Astana, Kazakhstan | 2024-02 - 2024-12

Led requirements discovery, process modeling, and delivery coordination for digital services. Prepared stakeholder-ready specifications and clarified implementation details with developers. Supported acceptance testing, release decisions, and risk tracking during delivery.

- Defined acceptance criteria for cross-functional delivery.
- Mapped workflows and clarified API requirements.
- Coordinated review cycles with product and engineering.
- Validated reporting data against stakeholder expectations.
- Prepared diagrams and implementation notes.

Business Analyst | Bobrosoft

Astana, Kazakhstan | 2023-03 - 2023-11

Led requirements discovery, process modeling, and delivery coordination for digital services. Prepared stakeholder-ready specifications and clarified implementation details with developers. Supported acceptance testing, release decisions, and risk tracking during delivery.

- Defined acceptance criteria for cross-functional delivery.
- Mapped workflows and clarified API requirements.
- Coordinated review cycles with product and engineering.
- Validated reporting data against stakeholder expectations.
- Prepared diagrams and implementation notes.

SKILLS

Business & Systems Analysis: Requirements, BPMN, User Stories, Acceptance Criteria, SQL, RACI

Java & Backend: Java, Spring MVC, JDBC, REST API, PostgreSQL, JUnit

Data & Reporting: Excel, Power BI, Dashboards, Reporting, Data Validation

Testing & Delivery: Mockito, GitHub Actions, Docker, Acceptance, Debugging

Communication: Stakeholders, Facilitation, Documentation, Handoff, Risks

EDUCATION

Bachelor: Information Systems | KAFU

Bachelor: Translation Studies | Eurasian Humanities Institute

MBA: IT Project Management | Institute of Project Management

Master: Business Analytics | Professional Analytics Center

COURSES AND CERTIFICATIONS

Business Analysis Foundations | LinkedIn Learning | requirements, stakeholders, scope

Java Backend Development | LinkedIn Learning | Java, API, testing

SQL for Data Analysis | LinkedIn Learning | queries, joins, reporting

Docker Essentials | LinkedIn Learning

ADDITIONAL WORK EXPERIENCE

Requirements Analyst | Regional Automation Office

Astana, Kazakhstan | 2022-05 - 2023-02

Led requirements discovery, process modeling, and delivery coordination for digital services.

Product Analyst | Public Services Lab

Astana, Kazakhstan | 2021-07 - 2022-04

Led requirements discovery, process modeling, and delivery coordination for digital services.

PROFESSIONAL ASPIRATIONS

I want to grow into a backend-focused analyst-developer role. I am interested in systems where business rules, data quality, and user workflows meet. My next step is to strengthen Java backend delivery while keeping strong analysis discipline. I prefer teams that value clear requirements, reliable tests, and practical documentation. Long term, I want to design maintainable digital products that reduce manual work. I also want to improve architecture decisions, API design, and database modeling. A strong environment for me includes feedback, ownership, and measurable delivery. I am motivated by useful tools, automation, and clear product outcomes. This direction combines my analysis background with hands-on engineering growth.
